

cimKIT Tankless Water Heater Valve Set

cim46#.1

FIPT Union x FIPT, Sweat, Press or Push Connection

Applications:

The Cimberio CimKIT is a valve set that includes one inlet and one outlet combination ball valve/union/drain and is used in the installation of tankless water heaters.

Features:

The Cimberio CimKIT is a purpose built valve set that combines the jobs of up to ten fittings created to provide a quick and easy installation of tankless water heaters without the need for field fabrications which could result in potential weak/leak points and increased material and labor costs. The two valve assemblies include integrated union adapters for direct connection to the cold water inlet and hot water outlet of the tankless water heater as well as integrated full port supply ball valves and full port system flushing/drain ball valves with hose thread connections and linked caps. The hot water valve assembly includes an outlet access port for a pressure relief valve. The CimKIT valve assemblies also feature 1/4-turn, forward facing, color coded handles that remain easily accessible, even when installed in recess boxes. CimKIT is available in four connections: FIPT, Sweat, Press (for connection to copper or stainless steel tube using standard crimp press tools) or Push (for connection to copper tube, PEX pipe or CPVC pipe without the need for tools, glue, or solder).

Connection Types

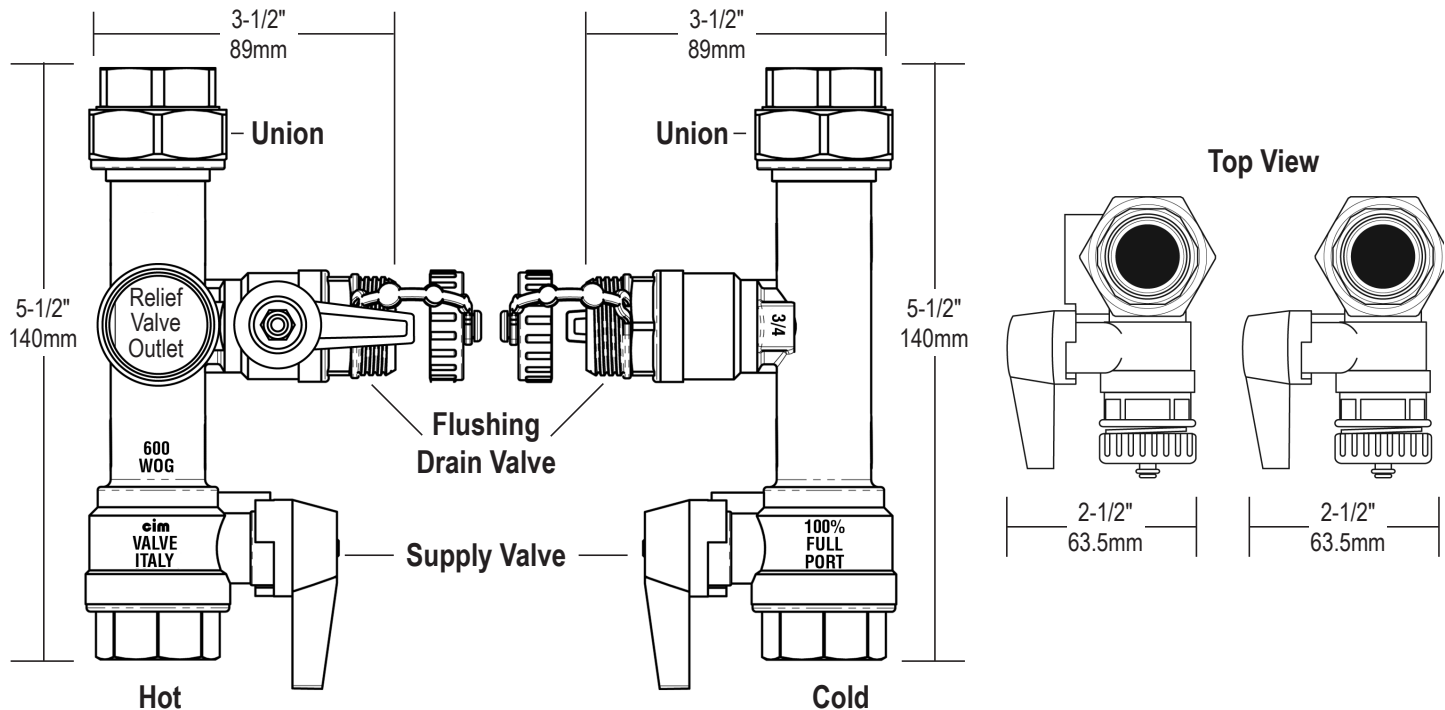

Cim 460 FIPT	Cim 461 Sweat	Cim 462 Press	Cim 467 Push

Size	Connection	Fast Order No.	Technical ID No.
